Sustainable Solano is offering a Water Wisdom Talk and Video Garden Tour on May 30 with permaculture expert Lydia Neilsen.

On the live Zoom talk Neilsen will discuss water management practices and how to design landscapes to absorb water, support vegetation and contribute to the restoration of the global water cycle and climate stability.

Through her business, Rehydrate the Earth, Neilsen works to address poor water management practices that have negatively affected the environment. She specializes in permaculture education, soil building, greywater, integrated poultry systems, water harvesting earthworks and productive water conserving landscapes, polyculture and efficient uses of limited space.

Neilsen's talk is free for those who register. There will be time for questions throughout the talk. If more than 100 people register, those who are unable to join live will receive a link to the recorded talk afterward.

Sustainable Solano also is recording a video tour of two Vallejo demonstration food forest gardens with Neilsen that will be released in the days before her live talk. These gardens, created through Sustainable Solano's Backyards program funded by the Solano County Water Agency, are waterwise, edible gardens that build soil, save water, support communities and provide habitat. The video will be shared publicly and sent in a link to those registered for the talk.

Register for the talk at <https://www.eventbrite.com/e/water-wisdom-talk-with-lydia-neilsen-tickets-104477920272>.
