

Use laundry water to keep landscapes green! Laundry to Landscape Graywater Starter Kit

Why send your laundry water to be treated at a sewage treatment plant when you could use it to water plants and trees in your own yard instead? Sending water that's clean enough for other uses out of the house with the sewage doesn't make sense. That's why many Californians use their laundry water to keep their landscapes green, even during times of drought.

The Urban Farmer Store' best-selling L2L graywater starter kit includes most of the parts to divert washing machine discharge to the landscape. It does not alter existing plumbing in any way so no permit is needed.

A step-by-step installation guide published by the SFPUC is a free download from our library at urbanfarmerstore.com.

All you need is a clothes washer, a flat or down-sloping garden the starter kit, and a commitment to saving water!

The number of mulch basin discharge sites in your landscape will vary depending on its soil type, washing machine type, and number of laundry loads. The kit includes only 10 feet of outdoor tubing—just enough to get well away from the house. Extra tubing and mulch basin discharge options sold separately.
